MatriX x-ray inspection systems expand into China

German manufacturer of high-speed x-ray systems augments its business and opens a subsidiary in Shenzhen, China

Dachau, Germany, Dec. 10th, 2008 – For Dachau (near Munich)-based MatriX Technologies, this is a logical and consequent step towards building its position in the global x-ray inspection market. The manufacturer's modern in-line solutions especially address the important Far Eastern electronic production market. MatriX is also intensifying its activities in the NDT area of **automatic** material analysis for castings/parts, which appeals to the increasingly important Asian automotive industry.

“The majority of MatriX AXI installations are globally operating clients who typically have increasing manufacturing sites in Asia. Improving our presence in that region is therefore key. This step is, in addition to further expansion of our worldwide distribution network, strategically important. A Chinese subsidiary ensures sales and support competence from day one”, explained Eckhard Sperschneider, managing director MatriX Technologies.

The recently opened sales and service office in the booming Shenzhen region is headed by Howard Zhou Jianquan, a Chinese native with many years of experience in board production and electronics. His primary focus is supporting local clients, e.g. Harman Becker, with technical and sales issues.

About MatriX Technologies:

MatriX Technologies is a global supplier of innovative solutions for x-ray inspection and non-destructive testing (NDT). The MatriX systems are based on leading-edge x-ray and vision technology and ensure the fulfilment of customers' quality requirements. The MatriX Technologies product portfolio encompasses real-time failure analysis, including standardised systems for manual and automatic x-ray inspection, as well as customised, fully integrated inspection solutions with a broad range of x-ray applications. The MatriX client base includes leading manufacturers in the electronics and automotive industries. More information about the company you will find at www.m-xt.com.
